PROFESSIONAL SUMMARY

Detail-oriented Software Developer with nearly 3 years of full-stack experience building, maintaining, and enhancing enterprise-grade software systems including large scale financial platforms processing millions of records daily at BNP Paribas. Proven ability to resolve complex software issues, optimize relational databases, and develop new programs that improve business operations.

TECHNICAL SKILLS

Languages: Core Java - OOP, Collections, Generics, Exception Handling, Multithreading, TypeScript, JavaScript, SQL, PL/SQL, HTML5, CSS3

Frameworks & Libraries: Spring Boot, Spring MVC, Angular 12–18, Bootstrap, Maven, REST APIs, Microservices

Databases: MySQL, PostgreSQL (joins, stored procedures, query optimization, normalized schemas)

DevOps & Delivery: Git, Jenkins, Artifactory, CI/CD pipelines, Agile/Scrum, Docker, Linux/Shell, JIRA, AWS (EC2, S3, Elastic Beanstalk).

PROFESSIONAL EXPERIENCE

Associate Software Engineer | [BNP Paribas ISPL — Chennai, India](#)

Jul 2021 – Oct 2023

- Maintained and enhanced a large-scale proprietary financial platform - functionally equivalent to an ERP system - supporting 170+ CRUD operations, 10+ database procedures, and millions of daily transaction records with high data integrity.
- Resolved critical software defects and performance issues across the full stack, improving overall application performance by 40% through systematic debugging, API optimization, and client-side refactoring.
- Designed and optimized relational database structures using normalized MySQL schemas and performance-tuned stored procedures, achieving a 20% reduction in query execution time.
- Developed new software programs and reusable modules to enhance business operations, accelerating future development cycles by 25% and driving a 20% improvement in project delivery efficiency.
- Provided technical support and clear written documentation to cross-functional teams, reducing non-technical internal support queries by 35%. Collaborated in Agile/Scrum teams across full product lifecycle - analysis, design, coding, testing, deployment, and troubleshooting maintaining strong attention to detail throughout.
- Built and maintained RESTful backend services using Node.js and Java/Spring, integrating securely with downstream systems to handle sensitive financial data across Windows-based development environments.
- Led UI development for a high-traffic application used by 600+ daily users, delivering a 30% reduction in page load time through advanced client-side optimization.

Developer Intern | [BNP Paribas ISPL — Chennai, India](#)

Feb 2021 – June 2021

- Developed internal tools enabling secure CRUD operations featuring reusable Angular Components.
- Designed responsive UI components for large datasets with filtering and structured visualization for easy user interaction.
- Participated in code reviews, testing, and collaborative debugging sessions, developing strong problem solving and quality assurance practices.

PROJECTS

Ledger: Payment & Expense Tracking Dashboard | [Angular 18](#) · [Spring Boot](#) · [MySQL](#) · [REST API](#) · [Docker](#) · [Live Demo](#) · [Source Code](#)

Timeline: Jan 2025 – Mar 2025

- Architected a full-stack expense tracking dashboard mirroring payment-processing systems from BNP Paribas - same domain.
- Built a sortable, filterable transaction table with client-side sorting and live-updating category summary totals.
- Implemented add/delete operations against a normalized MySQL schema with RESTful API endpoints following REST conventions and proper HTTP status codes. Containerized with Docker; static frontend deployed to GitHub Pages for public demo access.

Pipeline: CI/CD-Deployed Task & Sprint Manager | [Angular 18](#) · [Node.js](#) · [Express REST API](#) · [GitHub Actions](#) · [Live Demo](#) · [Source Code](#)

Timeline: Apr 2025 – Jun 2025

- Built a full-stack Kanban task manager where every commit runs through a full GitHub Actions CI/CD pipeline. Applied cloud-native deployment patterns including zero-downtime. Implemented localStorage persistence and RxJS catchError fallback so task state survives refreshes and the app loads data even when the backend is offline.

EDUCATION

Bachelor of Technology, Information Technology

2017 – 2021

Anna University, Chennai, India

Relevant Coursework: Computer Architecture, Design and Analysis of Algorithms, Data Structures, Operating Systems, Database Systems.
