PROFESSIONAL SUMMARY

Full-stack Software Developer with experience developing solutions across the entire stack - from scalable backend services to seamless user experiences. Comfortable working across all stages of the product life cycle including analysis, design, coding, testing, and troubleshooting. Proven ability to design and integrate RESTful APIs, collaborate on system architecture, build internal tools and track record includes 40% boost in application speed and deliver high-impact features in fast-paced Agile environments.

TECHNICAL SKILLS

Frontend: Angular 12+, TypeScript, JavaScript, HTML5, CSS3, Bootstrap, Responsive UX, React(Exposure).

Backend & APIs: Java, Spring MVC, Maven, Node.js (Exposure), RESTful API design & integration, Linux, Shell Scripting.

Data: MySQL, PostgreSQL (schema design, queries, stored procedures), PL/SQL.

Architecture & Delivery: Microservices (conceptual), Git, Jira, Jenkins, CI/CD, Agile/Scrum, Unit Testing, Visual Studio Code, IntelliJ.

WORK EXPERIENCE

Associate Software Engineer, BNP Paribas ISPL, Chennai, India

July 2021 – October 2023

- Developed solutions across the full stack by building scalable backend integrations while delivering high-performance user experiences for initiating & processing payment services and securely integrating with downstream systems to handle sensitive data.
- Drove a 20% improvement in project delivery efficiency by streamlining Angular development methodologies and managing critical end-to-end feature milestones across a system supported by 170+ CRUD operations and 10+ database procedures.
- Led UI feature development for a high-traffic financial application, resulting in a 30% reduction in page load time by implementing advanced, client-side sorting algorithms. This significantly improved real-time usability for 600+ daily users across diverse segments.
- Developed robust Spring-based microservices for a core payment engine, managing the end-to-end lifecycle of brokerage data from RESTful controllers to persistent storage. Leveraged **Dependency Injection** and **service-oriented architecture** to build a modular brokerage calculator, reducing calculation latency and improving system maintainability for downstream financial reporting.
- Developed scalable features enabling real-time payment updates, successfully handling throughput of millions of records daily with high data integrity. Built reusable Angular modules and shared services that accelerated future development by 25%.
- Streamlined relational database design by implementing a scalable database structure using normalized MySQL schemas and performance-tuned stored procedures, achieving a 20% reduction in query time to improve application responsiveness.
- Improved application performance by 40% through API optimization, client-side refactoring, and systematic debugging.
- Standardized project processes and workflow by creating highly structured documentation, boosting team clarity and directly reducing non-technical internal queries by 35%.

Intern Developer, BNP Paribas ISPL, Chennai, India

February 2021 – June 2021

- Developed internal tools enabling secure CRUD operations featuring **reusable Angular components**.
- Designed responsive UI components for large datasets with filtering and structured visualization for easy user interaction.
- Participated in code reviews, testing, and collaborative debugging.

ADDITIONAL EXPERIENCE

Freelance Full-Stack Developer

November 2023 – Present

- Architected and deployed scalable web applications utilizing Angular 12+ and high performance RESTful Microservices to enhance User engagement.
- Integrated third-party APIs into existing applications using JSON data formats and optimizing data transmission between services.
- Standardized system architecture and database schemas, leveraging PL/SQL to optimize data access patterns.

EDUCATION

Bachelor of Technology, Information Technology, Anna University, Chennai, India

CGPA: 8.67/10 | May 2021

Relevant Coursework: Computer Architecture, Design and Analysis of Algorithms, Data Structures, Operating Systems, Database Systems.

PROJECTS

Scalable E-Commerce Platform : Designed and implemented a full-stack application with responsive UX, secure 3rd-party payment integration, and reliable backend data flows using **Angular, REST APIs, Java and MySQL**.

Online Bookstore Application: Built a responsive web app featuring dynamic listings, category filtering, and cart management.

CERTIFICATIONS

- Certified Junior Angular developer – Angular Training, 2025.
- Front-End Development Training – Skill Safari, 2020.
